

PROTECTION OF PETS AND LIVESTOCK

Dangerous to bees. DO NOT spray any plants in flower when bees are foraging. Spray in the night or early morning when bees are not actively foraging. Before spraying, remove animals and pets from the areas to be treated. Cover or remove any open food and water containers. Cover or remove fish ponds, aquariums etc before spraying. Do not allow re-entry until spray has dried.

STORAGE, ACCIDENTAL SPILL, AND DISPOSAL

Storage: Store in closed original containers, in a cool, well ventilated area away from children, animals, food and feedstuffs. Do not store for prolonged periods in direct sunlight.

Accidental spill: - In case of spillage, confine and absorb spilled product with absorbent material such as sand, clay or cat litter. Do NOT allow spilled product to enter sewers, drains, creeks or any other waterways.

Disposal: - Dispose safely. Prevent chemical and chemical mixture from entering waterways. Spillage waste and empty bottle washes to be poured safely in landfills. Cleaned empty bottles to be crushed and recycled as per governing law applicable.

Known incompatibilities: Strong acids, strong bases, oils.

SAFETY DIRECTIONS

No special equipment is usually needed when occasionally handling small quantities. The following instructions are for bulk handling or where regular exposure in an occupational setting occurs without proper containment systems.

Ventilation: This product should only be used in a well-ventilated area. If natural ventilation is inadequate, use of a fan is suggested.

Eye Protection: Protective glasses or goggles should be worn when this product is being used. Failure to protect your eyes may cause them harm. Emergency eye wash bath/facilities are recommended in an area close to where this product is being used.

Skin Protection: Prevent skin contact by wearing impervious gloves, clothes and, preferably, apron. Make sure that all skin areas are covered. See below for suitable material types.

Protective Material Types: We suggest that protective clothing be made from the following materials: rubber, PVC.

Respirator: Usually, no respirator is necessary when using this product. However, if you have any doubts consult the Australian Standard mentioned above. Otherwise, not commonly necessary.

Ingestion: This product is harmful if swallowed. Take necessary precaution not to ingest product.

Sign and symptoms of poisoning: Skin contact causes skin numbness that may be irritating to the skin. Contact with eyes causes eye irritation which may include reddening, stinging and watering of eyes. Ingestion may cause burning sensation and reddening of skin in mouth and throat.

FIRST AID:

You should call The National Poison Control and Information Service, V- Philippines General Hospital - Emergency No: 8524-1078 / 8521-8450 loc 3311 if you feel that you may have been poisoned, burned or irritated by this product. Have this SDS with you when you call.

Inhalation: No first aid measures normally required. However, if irritation has occurred, and irritation has developed, remove to fresh air and observe until recovered. If irritation becomes painful or persists more than about 30 minutes, seek medical advice.

Skin Contact: Wash gently and thoroughly with water (use non-abrasive soap if necessary) for 5 minutes or until chemical is removed.

Eye Contact: Immediately flush the contaminated eye(s) with lukewarm, gently flowing water for 20 minutes or until the product is removed, while holding the eyelid(s) open. Take care not to rinse contaminated water into the unaffected eye or onto the face. Obtain medical attention immediately. Take special care if exposed person is wearing contact lenses.

Ingestion: If swallowed, do NOT induce vomiting. Wash mouth with water and contact the National Poison Control and Information Service or call a doctor.

DIRECTIONS FOR USE

SITUATION	RATE	CRITICAL COMMENTS
Cockroaches, Mosquitoes, Ants		
Internal & external areas & surrounds of Domestic, Commercial, Public and Industrial buildings & structures -suitable for Residual Surface Treatments	5-10 mL / 1 L of water	Use the higher rate in situations where pest pressure is high, when rapid knockdown and maximum residual protection is desired. The lower rate may be used for follow-up treatments. Mosquitoes: apply prepared spray to surfaces where insects rest or harbour. Reapply as necessary. To form Residual Surface Treatments: Apply prepared spray to indoor and outdoor surfaces where insects rest or harbour. Internal harbourage sites include (but are not restricted to) areas such as walls, fly screens, behind and under sinks, under furniture and indoor plants. External harbourage sites include (but are not restricted to) areas such as building exteriors, eaves, walls, fences, also garages, sheds, gazebos, ornamental plants, bushes, shrubs, hedges, shady or damp areas around buildings. Reapply as necessary. Application to vegetation: Ensure that spray penetrates entire plant or hedge and covers both leaf surfaces. Perimeter or harbourage treatments: Apply the prepared spray to a band of soil or vegetation 2 to 3 metres wide around and adjacent to the structure. Also treat the foundation of the structure to a height of approximately 1 metre. Use a spray volume of 5 to 10 L per 100 m ² . Higher volumes of water may be needed if organic matter is present or foliage is dense. Non-porous surfaces: Apply as a coarse spray at the rate of 1 L of emulsion per 20 m ² . When treating porous surfaces, do not exceed the point of run-off. Porous surfaces: Spray at the rate of 1 L of emulsion per 10 m ² . When treating porous surfaces, do not exceed the point of run-off.
Termites		
Pre-construction Barriers - For protection of new buildings.	1:200 L of water and 5L mixture per sqm	Apply with suitable application equipment to form a complete and continuous chemical barrier (both vertical and horizontal) under the slabs. The formation of the barrier may require any one or a combination of conventional open wand application, soil trenching and/or rodding application.
Post-construction Barriers - For protection of existing buildings.	1:200 L of water and 5L mixture per sqm	Apply perimeter chemical barriers around slabs, subterranean walls and external penetration points. Apply with suitable application equipment to form a continuous chemical barrier (both vertical and horizontal) around the structure. The formation of the barrier may require one or a combination of several application techniques, including soil trenching, rodding and open wand applications.

REAPPLICATION TIME FOR TERMITE TREATMENT

The recommended reapplication time for the product is 3 years.

MIXING

Add the required quantity of MAXXTHOR to water in the spray tank and mix thoroughly. Maintain agitation during both mixing and application.

PRECAUTIONS

DO NOT spray directly on humans, pets or animals. Avoid contact with food, food utensils or preparation surfaces. Keep out of reach of children. Avoid breathing mist. Wash contaminated areas thoroughly after handling. Do not eat, drink or smoke when using this product. Avoid release to the environment.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND THE ENVIRONMENT

Dangerous to fish and aquatic organisms. Do not contaminate dams, rivers, streams, waterways or drains with product or the used container. Do not apply to mud, sand, mangrove or aquatic habitats. Drift from treated areas may be hazardous to organisms in adjacent aquatic sites. Extreme caution must be used to avoid aquatic contamination. Avoid spraying flowers that attract and harbour bees.
