REQUIEM[®] **TERMITE BAIT**

An insect development inhibitor type insecticide for use with
EXTERRA[™] TERMITE BAITING SYSTEM,
an integrated system for the management of subterranean
termite infestations

Termite bait powder formulation for control of subterranean termites.
For Professional Pest Control Use Only.

Active ingredient:

Chlorfluazuron 0.1% w/w

Manufactured by:

ENSYSTEX AUSTRALASIA PTY LTD
Unit 3 The Junction Estate
4-6 Junction Street AUBURN NSW 2144
Australia

Distributor/Importer:

ENSYSTEX PHILIPPINES, INC.
330 Calvo Bldg., 266 Escolta,
Binondo, Manila, Metro Manila
Phone 243 1477

Net Contents:

4 kg

WARNING. May be harmful if swallowed.
May cause respiratory irritation, drowsiness or dizziness.
May be harmful in contact with skin. Harmful to aquatic life.

HSR No. 8187

ENSYSTEX[®]

DIRECTIONS FOR USE:

REQUIEM Termite Bait must be used only as part of an integrated termite management program by termite specialists approved by Ensystex to use the EXTERRA Termite Baiting System (referred to below as EXTERRA).

Situation	Pest	Rate	Critical Comments
For use in integrated termite management programs in and around residential and commercial properties, including food handling establishments and other areas where termite presence can be detected e.g. fences, utility poles, bridges, wharves and landscape structures in all areas of the Philippines. Not to be applied in areas of flooding and overrunning water.	Subterranean termite <i>Coptotermes gestroi</i> (Philippine milk termite)	Mix bait and water to make an easy flowing slurry. May use the following as guidance: For AGS - 100 g in 500 mL of water *AGS - Above Ground Station	Do not use water that has been chlorinated or contaminated in any way. Stir the mixture until a paste of uniform consistency is achieved. Add bait as necessary to approved EXTERRA Bait Stations. Replenish as required. When handling the bait matrix wear disposable latex rubber gloves to ensure odours or contaminants that may deter termite feeding are not transferred to the bait matrix.

GENERAL INSTRUCTIONS

REQUIEM is used with Ensystex approved Above-ground Stations (AGS). Station placement is focused in areas where termites are most likely to be found foraging. These Stations are installed wherever/in all foraging sites on a structure. Stations are installed carefully with minimum disturbances. Screw or duct tape are generally used for securing the station properly. Stations are then filled with the bait mixture. Stations are inspected every 2-4 weeks, based on the requirement. Stations are supplemented with bait if bait is eaten. The bait supplementation is terminated when feeding and termite activity in the stations stops. When the colony has been eliminated, excess REQUIEM is removed, and the structure is kept under monitoring.

Termite management

To minimize the risk of termite infestation, the sub-floor area of buildings should be kept free of stored or waste timber and all other building materials that attract termites. Appropriate action should also be taken to eliminate any undue dampness caused by leaking water or sewerage pipes, or inadequate drainage.

Service requirement

Regular, competent inspections by a licensed Pest Manager are recommended as part of an overall termite management program to determine the prevailing termite pressure and environmental conditions and consequent requirement for further termite management options. Inspections should be performed at least on an annual basis, but more frequent inspections are strongly recommended.

STORAGE AND DISPOSAL

Store in the closed, original container in a dry, cool, well-ventilated area out of direct sunlight. Single rinse the plastic bags before disposal. Dispose of wash water in a disposal pit specifically marked and set up for the purpose, do not allow it to flow to desirable vegetation and tree roots. The plastic bags can be dried and sent for recycling. Empty plastic bags and product should not be burnt or reused in any station. Dispose of contents/container in accordance with local, regional, national/international regulations.

Known incompatibilities: Strong oxidising agents.

SPILLS

Sweep up material and wrap in paper. Dispose of as above. Prevent entry of spilled matter into drains, sewerage pits and contain spill. Sweep up and shovel or collect recoverable product into lined containers for recycling or salvage, and dispose of promptly. Containment if appropriate if the quantity is small. Recycle containers wherever possible after careful cleaning.

PRECAUTIONS

No special equipment is usually needed. The following instructions are for bulk handling or where regular exposure in an occupational setting occurs without proper containment systems.

Ventilation: No special requirements.

Eye: Eye protection is not normally necessary when this product is being used. However, if in doubt, wear suitable protective glasses or goggles.

Skin Contact: Take necessary precaution not to allow contact with skin. Wear disposable gloves while working with the bait. Wash with soap and water after use and before eating, drinking or smoking.

Inhalation: Avoid breathing dust. May cause coughing due to the mechanical action of the powder. If there is a significant chance that dusts are likely to build up in the area where this product is being used, we recommend that you use a suitable dust mask. Otherwise, not normally necessary.

Ingestion: Take necessary precaution not to ingest the product.

Signs and symptoms of poisoning: This product is not hazardous and any signs and symptoms of poisoning or exposure, would be mild transient discomfort. If in doubt follow the first aid treatment below.

FIRST AID TREATMENT

You should call The National Poison Control and information Service, c/- Philippines General Hospital - Emergency Nos: 8524-1078 / 8521-8450 loc 2311 if you feel that you may have been poisoned or irritated by this product. Have the SDS with you when you call.

Inhalation: Remove from source of dust to fresh air. If in doubt, contact the National Poison Control and information Service or a doctor.

Skin Contact: Brush off loose particles from skin. If irritation does occur, flush with lukewarm, gently flowing water for 5 minutes or until product is removed.

Eye Contact: Flush contaminated eye(s) with lukewarm, gently flowing water for 5 minutes or until the product is removed. Obtain medical advice if irritation becomes painful or lasts more than a few minutes. Take special care if exposed person is wearing contact lenses.

Ingestion: If product is swallowed or gets in mouth, do NOT induce vomiting; wash mouth with water and give some water to drink. If symptoms develop, or if in doubt contact the National Poison Control and information Service or a doctor.

NOTES TO PHYSICIAN: In case of any adverse effect detected due to product use treat symptomatically and provide necessary supportive care.

PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

Be careful to aquatic organisms. DO NOT contaminate streams, rivers or waterways with the chemical or used containers. DO NOT place Requiem in any area where, because of movement of water or spillage when applying product, it could be washed into a body of water containing aquatic life, such as ponds or streams.

SAFETY DATA SHEET
